

Simple Crab

By Wensdy Whitehead

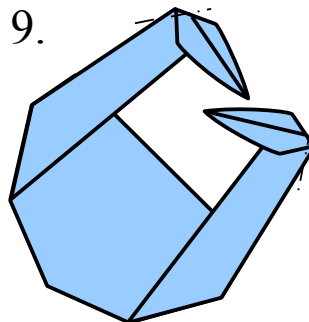

Recommended Paper: 6" (15cm) square kami or paper-backed foil.

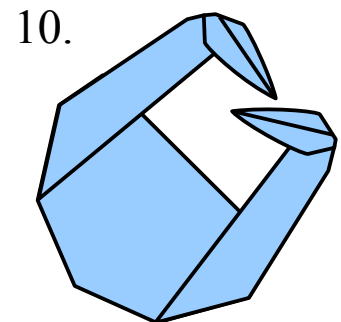

RAT folds to narrow the legs. (For a flat crab, leave longer unfolded tips to become the claws.)

Form the claws by opening the tips from the inside and swiveling toward the body of the crab and starting a squash that will not lie flat. Include some of the point which was narrowed in step 6 for a 3D claw. (For flat, put the pivot point at the blunt corner.) Use somewhat different angle so that the claws don't overlap.

Small mountain folds will hold the claws in place.

Done!
